

INTRODUCING AI & CHATGPT

-ALFIE

WHAT IS AI & CHATGPT ?

- AI stands for Artificial Intelligence, which refers to the development of computer systems or machines that can perform tasks that typically require human intelligence. AI involves creating algorithms and models that enable machines to understand, learn, reason, and make decisions in a way that mimics human thinking and behavior.
- ChatGPT is a specific example of an AI model developed by OpenAI. It is based on the GPT (Generative Pre-trained Transformer) architecture, which is a deep learning model designed for natural language processing tasks. ChatGPT specifically focuses on generating human-like responses to text inputs, allowing users to have interactive conversations with the AI model. It has been trained on vast amounts of text data and can generate coherent and contextually relevant responses based on the input it receives. ChatGPT is a powerful tool for various applications, including virtual assistants, customer support, and generating human-like text.
